Which uncorrected error term moves which Q

Raw trace rebuilt from the NIST e-cal result using the e-cal's own error terms,
switched on one at a time and refit. Brackets: change vs. the e-cal. Orange = higher, blue = lower.

What is left uncorrected	Q_L	Q_i	Q_e	β
Nothing (NIST e-cal)	39.9	73.0	88.1	0.83
Loss + delay only (tracking, -4.5 dB)	40.8 (+1)	74.6 (+2)	90.0 (+2)	0.83
Loss + delay + directivity (|e00| = 0.17)	43.3 (+3)	67.3 (-6)	121.5 (+33)	0.55
Loss + delay + source match (|e11| = 0.22)	49.4 (+10)	88.7 (+16)	111.6 (+23)	0.80
All three (= raw data)	**52.0 (+12)**	**77.8 (+5)**	**157.2 (+69)**	**0.49**
